PROFESSIONAL SUMMARY

Results-driven Software Development Engineer (SDE) with 2+ years of contract experience building scalable, production-grade REST APIs, real-time WebSocket systems, and AI-driven automation pipelines. Delivered 5–10 client engagements using object-oriented design principles, Agile/Scrum workflows, and event-driven microservices architecture. Skilled in system design, data structures, and CI/CD-aligned delivery; currently extending a distributed chat platform with Redis pub/sub and Apache Kafka for horizontal scalability and fault-tolerant message processing.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Typescript, C++, SQL

Backend: Node.js, Express.js, NestJS, REST APIs, WebSocket (Socket.io), JWT, PASETO, Microservices

Databases: MongoDB, PostgreSQL, Redis (caching & pub/sub), VectorDB (planned integration)

AI & Automation: n8n, Zapier, OpenAI API, NVIDIA AI APIs, Prompt Engineering, LLM Agents

DevOps & Tools: Docker, Git (Version Control), GitHub, Apache Kafka, Postman, CI/CD Pipelines

Concepts: DBMS, OOPs, System Design(HLD Concepts), RESTful API Design, Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Software Engineer — Contract & Freelance

2023 – 2025 | **Live**

Independent Contractor / Remote / 5–10 Client Engagements (E-commerce, SaaS, Services)

- Architected and deployed 5+ scalable full-stack web applications for e-commerce and SaaS clients using Node.js, Express.js, PostgreSQL, and MongoDB, following object-oriented design principles.
- Engineered n8n and Zapier automation workflows integrating CRM platforms, third-party APIs, and SMTP pipelines, improving customer retention by automating re-engagement sequences and reducing manual follow-up by approximately 70%.
- Designed behavioral-event-triggered communication pipelines that increased repeat engagement for 3+ clients, reducing reported churn through timely, personalized automated touchpoints and data-driven segmentation.
- Implemented JWT/OAuth 2.0 authentication, RESTful API backends, and version-controlled codebases (Git) across client projects; conducted code reviews to maintain consistent quality and security standards.
- Applied systematic debugging to resolve production incidents including API integration failures and CI/CD deployment breakages, restoring system uptime and minimizing client-facing downtime across all active engagements.

PROJECTS

Chatify — Scalable Real-Time Chat Platform

Socket.io / Redis / Kafka / PostgreSQL | **GitHub**

- Engineered a WebSocket-based chat system using Node.js and Socket.io supporting 100–500 concurrent users with sub-100ms message delivery latency; applied system design principles for horizontal scalability.
- Designed normalized PostgreSQL schema managing users, conversation threads, and session state, ensuring consistency between real-time events and persistent storage with performance-optimized queries.
- Integrating Redis pub/sub for horizontal WebSocket scaling across multiple server instances, eliminating single-node bottlenecks and enabling stateless horizontal scaling of real-time message broadcasting.
- Implementing Apache Kafka as a fault-tolerant event queue, decoupling message producers from consumers to guarantee reliable delivery and support high-throughput burst-traffic scenarios.

AI-Powered Job Search Automation Platform

n8n / NVIDIA AI APIs / MongoDB / Node.js / SMTP

- Built an end-to-end 4-stage automated pipeline (scrape listings, LLM relevance scoring, generate tailored PDF/DOCX resume and cover letter, SMTP delivery), reducing per-application manual effort to near zero.
- Designed MongoDB schema optimized for fast document retrieval and n8n workflow state management; architected modular pipeline nodes for future VectorDB semantic job-to-profile matching integration.
- Orchestrated multi-step LLM agent workflows using NVIDIA AI APIs and n8n, coordinating scraping, scoring, document generation, and automated email delivery as a single observable, debuggable pipeline.

EDUCATION

B.Tech, Mechanical Engineering

Expected June 2026

LNM Institute of Information Technology (LNMIIT), Jaipur, Rajasthan
